Applicant(s)

BRADLEY ET AL.

Examiner

Namitha Pillai

Art Unit

2173

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 July 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 16 May 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. The Examiner acknowledges Applicant's submission on 7/12/05, wherein claims 1 and 7 were amended to better specify the present invention. All pending claims are rejected, wherein the previous rejection has been maintained.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-14 and 17-19 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by U. S. Patent No. 6, 449, 604 B1 (Hansen et al.), herein referred to as Hansen.

Referring to claim 1, Hansen discloses a method of displaying analytics about a website resident on a server computer (column 1, lines 10-12 and column 4, lines 32-34). Hansen discloses causing a browser program to be opened on the server computer with a first display frame and a second display frame immediately adjacent to the first display frame, wherein the first display frame comprises a page of the website (column 2, lines 62-67). Hansen discloses writing a unique first identifier associated with the content of the page in and to the page displayed in the first display frame and creating an interface call to a report server (column 3, lines 18-42), wherein the unique identifier can represent URLs and other identifiers found within the web page, wherein used as an index to access report data. Hansen also discloses retrieving a

Art Unit: 2173

report file corresponding to the first identifier from the report server (column 3, lines 28-36).

Hansen discloses displaying the analytics in the report file in the second display frame (column 2, lines 62-65). Hansen also discloses after a pre-determined period of time, the report file comparing the page displayed in the first display frame with the first identifier and, (f) if different, repeating the method from step (b) for the page displayed in the first display frame, or (g) if the same, resetting for a second of the pre-determined period of time and repeating the method from step (e) (column 9, lines 15-37).

Referring to claims 2 and 3, Hansen discloses that the analytics are gathered from technical specifications of visitors to the website (column 6, lines 4-20).

Referring to claims 4 and 9, Hansen discloses that the steps are carried out by a module launched from a reporting program resident on the server computer (column 4, lines 32-34).

Referring to claims 5 and 8, Hansen discloses that the steps are carried out by a module launched from a reporting program resident on the report server (column 4, lines 32-34).

Referring to claims 6 and 10, Hansen discloses that step b is carried out by starting an initializing file configured to tag the page displayed in the first display frame with the first identifier and create the interface call to the report server (column 5, lines 25-34).

Referring to claim 7, Hansen discloses a computer software product for configuring a computer to display analytics about a website resident on a server computer (column 1, lines 10-12 and column 4, lines 32-34). Hansen discloses launching an analytics module (column 5, lines 29-35). Hansen discloses causing a browser program to be opened on the server computer with a first display frame and a second display frame immediately adjacent to the first display frame, wherein the first display frame comprises a reproduction of a page of the website (column 2,

Art Unit: 2173

lines 62-67). Hansen discloses writing a unique first identifier associated with content of the page in and to the page displayed in the first display frame with a first identifier and creating an interface call to a report server (column 3, lines 18-42), wherein the unique identifier can represent URLs and other identifiers found within the web page, wherein used as an index to access report data. Hansen discloses retrieving a report file corresponding to the first identifier from the report server (column 3, lines 28-36). Hansen also discloses displaying the analytics in the report file in the second display frame (column 2, lines 62-65). Hansen also discloses after a pre-determined period of time, the report file comparing a page identifier of the page displayed in the first display frame with the first identifier and if different, repeating the method from step (c) for the page displayed in the first display frame in order to update the report to match the page currently displayed or if the same, resetting for a second if the pre-determined period of time and repeating the method from step (f) until the page identifier differs from the first identifier (column 3, lines 4-9 and column 9, lines 15-37).

Referring to claim 11, Hansen discloses that the identifier is a cookie stored in the browser program (column 8, lines 7-8).

Referring to claim 12, Hansen discloses that the initializing file is an HTML file (column 5, lines 25-34).

Referring to claim 13, Hansen discloses that the analytics are displayed in graphical format (column 6, lines 12-15).

Referring to claim 14, Hansen discloses that the analytics are displayed in tabular format (column 6, lines 17-19).

Art Unit: 2173

Referring to claim 17, Hansen discloses that the report server and the server computer are the same (column 4, lines 32-34).

Referring to claim 18, Hansen discloses that the interface call is carried out by a common gateway interface script (column 8, lines 18-20).

Referring to claim 19, Hansen discloses that the page identifier is the uniform resource locator of the web page (column 3, lines 29-36).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hansen.

Referring to claims 15 and 16, Hansen does not disclose that pre-determined time is in the range of 0.1 seconds to 1 second or that the preferable time would be 0.5 seconds. It would have been obvious for one skilled in the art at the time of the invention to set the predetermined time within the range of 0.1 seconds to 1 second with a preference for 0.5 seconds. Hansen discloses a threshold value of T which may represent any value chosen by the developer of the system, wherein this T determines the predetermined time that is considered for changes to a website. Based on the need of the system and the users, the developer of the system would choose any value for the T, one of those values being within the range of 0.1 to 1 seconds with a preference for 0.5 seconds.

Response to Arguments

Art Unit: 2173

4. Applicant's arguments filed 7/12/05 have been fully considered but they are not persuasive.

With respect to Applicant's arguments that the URL of a web page is not associated with the page content. The URL presents the identity of a page, wherein when a URL is requested, this information is used to identify a distinct page, accessing this page and further displaying it to the user. This clearly discloses an association between the URL and the contents of the page, wherein the URL is the identification means through which these contents are located and accessed.

With respect to Applicant's arguments that Hansen does not disclose comparing the data displayed, wherein Hansen merely relies on "click" events. Hansen discloses using click events, but further discloses that a determination is made to recognize the contents of the page, be it as a result of clicking by a user. Hansen discloses that these click events are based on interacting with contents of the page and determining the time difference of when interaction has occurred between contents of a web page.

With respect to Applicant's arguments that Hansen does not disclose a unique identifier as referred to in the present invention. Hansen, as is also claimed in the language, clearly teaches that URL and further page contents are used as index to determine and access usage data and amount of user interaction with the current display. In addition to this URL, Hansen further teaches how CGI processes are carried out to ensure that URLs are even more specific, by adding a unique identifier to further customize and determine specifics related to interaction and log data (column 8, lines 25-38).

Conclusion

5. Responses to this action should be submitted as per the options cited below: The United States Patent and Trademark Office (Office) requires most patent related correspondence to be: a) faxed to the Central FAX number (571-273-8300) (updated as of July 15, 2005), b) hand carried or delivered to the Customer Service Window (located at the Randolph Building, 401 Dulany Street, Alexandria, VA 22314), c) mailed to the mailing address set forth in 37 CFR 1.1 (e.g., P.O. Box 1450, Alexandria, VA 22313-1450), or d) transmitted to the Office using the Office's Electronic Filing System. On July 15, 2005, the Central Facsimile (FAX) Number will change from 703-872-9306 to 571-273-8300. Faxes sent to the old number will be routed to the new number until September 15, 2005. After September 15, 2005, the old number will no longer be in service and 571-273-8300 will be the only facsimile number recognized for "centralized delivery." The official notice dated June 20, 2005 also includes an "updated list of exceptions to the centralized delivery and facsimile transmission policy for patent related correspondence." Questions regarding this notice may be e-mailed to PatentPractice@uspto.gov, or directed to the Inventors' Assistance Center by telephone at 800-786-9199, or 571-272-1000.

Please label "PROPOSED" or "DRAFT" for informal facsimile communications. For after final responses, please label "AFTER FINAL" or "EXPEDITED PROCEDURE" on the document.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Namitha Pillai whose telephone number is (571) 272-4054. The examiner can normally be reached on 8:30 AM - 5:30 PM.

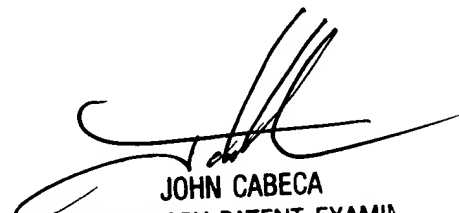

Art Unit: 2173

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cabeca can be reached on (571) 272-4048.

All Internet e-mail communications will be made of record in the application file. PTO employees do not engage in Internet communications where there exists a possibility that sensitive information could be identified or exchanged unless the record includes a properly signed express waiver of the confidentiality requirements of 35 U.S.C. 122. This is more clearly set forth in the Interim Internet Usage Policy published in the Official Gazette of the Patent and Trademark on February 25, 1997 at 1195 OG 89.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-3800.
